

# Package ‘datelife’

August 22, 2017

**Title** Underlying code for DateLife service

**Version** 0.2.13

**Author** Brian O'Meara <omeara.brian@gmail.com>, Luna L. Sanchez Reyes, Jonathan Eastman, Tracy Heath,  
April Wright, Klaus Schliep, Scott Chamberlain, Peter Midford, Luke Harmon,  
Joseph Brown, Matt Pennell, Mike Alfaro.

**Maintainer** Brian O'Meara <omeara.brian@gmail.com>

**Description** This contains the core code for going from a tree or list of taxa  
to a chronogram.

**Depends** R (>= 3.2.3)

**Imports** ape, abind, bold, phangorn, phytools, ips, compare, geiger,  
stringr, rotl, knitcitations, phylobase, treebase

**Suggests** testthat

**SystemRequirements** mafft, PATHd8

**URL** <https://github.com/phylostatic/datelife>, <http://www.datelife.org>

**License** GPL (>=2)

**LazyData** true

**RoxygenNote** 6.0.1

---

AllMatching	<i>Are all desired taxa in the patristic.matrix?</i>
-------------	--

---

**Description**

Are all desired taxa in the patristic.matrix?

**Usage**

AllMatching(patristic.matrix, taxa)

**Arguments**

- patristic.matrix  
A patristic matrix, rownames and colnames must be taxa
- taxa  
A vector of taxon names

**Value**

A Boolean

---

BindMatrices	<i>Convert list of patristic matrices to a 3D array</i>
--------------	---

---

**Description**

Convert list of patristic matrices to a 3D array

**Usage**

```
BindMatrices(patristic.matrix.list, pad = TRUE)
```

**Arguments**

<code>patristic.matrix.list</code>	List of patristic matrices
<code>pad</code>	If TRUE, pad missing entries

**Value**

A 3d array of patristic matrices

---

CalculateOverlapTable	<i>Create an overlap table</i>
-----------------------	--------------------------------

---

**Description**

Create an overlap table

**Usage**

```
CalculateOverlapTable(results.table)
```

**Arguments**

<code>results.table</code>	An author.results or curator.results data.frame
----------------------------	---

**Value**

Data.frame with info on people and what clades they've worked on

---

CleanChronogram	<i>Clean up some issues with OToL chronograms</i>
-----------------	---

---

**Description**

Clean up some issues with OToL chronograms

**Usage**

CleanChronogram(phy)

**Arguments**

phy	Input phylo object
-----	--------------------

**Value**

A cleaned up phylo object

---

ConvertSpacesToUnderscores	<i>Convert spaces to underscores in trees</i>
----------------------------	---

---

**Description**

Convert spaces to underscores in trees

**Usage**

ConvertSpacesToUnderscores(phy)

**Arguments**

phy	A phylo object
-----	----------------

**Value**

A phylo object

---

`ConvertUnderscoresToSpaces`*Convert underscores to spaces in trees*

---

**Description**

Convert underscores to spaces in trees

**Usage**

```
ConvertUnderscoresToSpaces(phy)
```

**Arguments**

<code>phy</code>	A phylo object
------------------	----------------

**Value**

A phylo object

---

`CreateContributorCache`*Create a cache from Open Tree of Life*

---

**Description**

Create a cache from Open Tree of Life

**Usage**

```
CreateContributorCache(outputfile = "contributorcache.rda", verbose = TRUE)
```

**Arguments**

<code>outputfile</code>	Path including file name
<code>verbose</code>	If TRUE, give status updates to the user

**Value**

List containing author and curator results

---

CreateTreeBaseCache	<i>Create a cache from TreeBase</i>
---------------------	-------------------------------------

---

### Description

Create a cache from TreeBase

### Usage

```
CreateTreeBaseCache(outputfile = "treebasecache.rda", verbose = TRUE)
```

### Arguments

outputfile	Path including file name
verbose	If TRUE, give status updates to the user

### Value

List containing author and curator results

---

EstimateDates	<i>Core function to go from a vector of species, newick string, or phylo object get a chronogram or dates back</i>
---------------	--

---

### Description

Core function to go from a vector of species, newick string, or phylo object get a chronogram or dates back

### Usage

```
EstimateDates(input = c("Rhea americana", "Pterocnemis pennata",
  "Struthio camelus"), output.format = "phylo.sdm", partial = TRUE,
  usetnrs = FALSE, approximatematch = TRUE,
  cache = get("opentree_chronograms"), method = "PATHd8")
```

### Arguments

input	A vector of names, a newick string, or a phylo object
output.format	The desired output format. See details.
partial	If TRUE, use source trees even if they only match some of the desired taxa
usetnrs	If TRUE, use OpenTree's services to resolve names. This can dramatically improve the chance of matches, but also take much longer
approximatematch	If TRUE, use a slower TNRS to correct misspellings, increasing the chance of matches (including false matches)
cache	The cached set of chronograms and other info from data(opentree_chronograms)
method	The method used for congruification. PATHd8 only right now, r8s and treePL later.

**Details**

The output formats are citations, mrca, newick.all, newick.sdm, newick.median, phylo.sdm, phylo.median, phylo.all, html

**Value**

Varies depending on the chosen format

**Examples**

```
ages <- EstimateDates(c("Rhea americana", "Pterocnemis pennata", "Struthio camelus", "Mus musculus"), output.f
```

---

FindMatchingStudyIndex

*Find the index of relevant studies in a opentree\_chronograms object*

---

**Description**

Find the index of relevant studies in a opentree\_chronograms object

**Usage**

```
FindMatchingStudyIndex(filtered.results, cache = get("opentree_chronograms"))
```

**Arguments**

filtered.results  
 The patristic.matrices that will be used  
 cache  
 The cache of studies

**Value**

A vector with the indices of studies that have relevant info

---

GetAge

*Get time of MRCA from patristic matrix*

---

**Description**

Get time of MRCA from patristic matrix

**Usage**

```
GetAge(patristic.matrix, partial = TRUE)
```

**Arguments**

patristic.matrix  
 A patristic matrix  
 partial  
 If TRUE, drop NA from the patristic matrix; if FALSE, will return NA if there are missing entries

**Value**

The depth of the MRCA

---

GetAges	<i>Get vector of MRCA from list of patristic matrices</i>
---------	---

---

**Description**

Get vector of MRCA from list of patristic matrices

**Usage**

```
GetAges(filtered.results, partial = TRUE)
```

**Arguments**

filtered.results	List of patristic matrices
partial	If TRUE, drop NA from the patristic matrix; if FALSE, will return NA if there are missing entries

**Value**

Vector of MRCA ages with names same as in filtered.results

---

GetAllCalibrations	<i>Get all calibrations given trees in database</i>
--------------------	---

---

**Description**

Get all calibrations given trees in database

**Usage**

```
GetAllCalibrations(input = c("Rhea americana", "Pterocnemis pennata",
  "Struthio camelus"), partial = TRUE, usetnrs = FALSE,
  approximatematch = TRUE, cache = get("opentree_chronograms"))
```

**Arguments**

input	A vector of names, a newick string, or a phylo object
partial	If TRUE, use source trees even if they only match some of the desired taxa
usetnrs	If TRUE, use OpenTree's services to resolve names. This can dramatically improve the chance of matches, but also take much longer
approximatematch	If TRUE, use a slower TNRS to correct misspellings, increasing the chance of matches (including false matches)
cache	The cached set of chronograms and other info from data(opentree_chronograms)

**Value**

data.frame of calibrations

---

GetBoldOToLTree	<i>Use Barcode of Life data to get branch lengths on the OToL tree</i>
-----------------	--

---

**Description**

Use Barcode of Life data to get branch lengths on the OToL tree

**Usage**

```
GetBoldOToLTree(input = c("Rhea americana", "Struthio camelus",
  "Gallus gallus"), marker = "COI", otol_version = "v2", doML = FALSE)
```

**Arguments**

input	A vector of names
marker	Gene name to select
otol_version	Version of OToL to use
doML	Boolean; if TRUE, does ML brlen optimization

**Value**

A phylogeny with ML branch lengths

---

GetFilteredResults	<i>Go from a vector of species, newick string, or phylo object to a list of patristic matrices</i>
--------------------	--

---

**Description**

Go from a vector of species, newick string, or phylo object to a list of patristic matrices

**Usage**

```
GetFilteredResults(input = c("Rhea americana", "Pterocnemia pennata",
  "Struthio camelus"), partial = TRUE, usetnrs = FALSE,
  approximatematch = TRUE, cache = get("opentree_chronograms"),
  method = "PATHd8")
```

**Arguments**

input	A vector of names, a newick string, or a phylo object
partial	If TRUE, use source trees even if they only match some of the desired taxa
usetnrs	If TRUE, use OpenTree's services to resolve names. This can dramatically improve the chance of matches, but also take much longer
approximatematch	If TRUE, use a slower TNRS to correct misspellings, increasing the chance of matches (including false matches)
cache	The cached set of chronograms and other info from data(opentree_chronograms)
method	The method used for congruification. PATHd8 only right now, r8s and treePL later.

**Value**

List of patristic matrices

---

Get0ToLChronograms	<i>Get all chronograms from Open Tree of Life</i>
--------------------	---

---

**Description**

Get all chronograms from Open Tree of Life

**Usage**

```
Get0ToLChronograms(verbose = FALSE)
```

**Arguments**

verbose	If TRUE, give updates to the user
---------	-----------------------------------

**Value**

A list with elements for the trees, authors, curators, and study ids

---

GetSubsetArrayDispatch	<i>Figure out which subset function to use</i>
------------------------	--

---

**Description**

Figure out which subset function to use

**Usage**

```
GetSubsetArrayDispatch(study.element, taxa, phy = NULL, phy4 = NULL,
  method = "PATHd8")
```

**Arguments**

study.element	The thing being passed in: an array or a phylo to serve as reference
taxa	Vector of taxon names to get a subset for
phy	A user tree to congruify in phylo format (ape)
phy4	A user tree to congruify in phylo4 format (phylobase)
method	Which method to use for congruification

**Value**

A patristic matrix with for the taxa.

---

HasBrlen	<i>Check for branch lengths in a tree</i>
----------	---

---

**Description**

Check for branch lengths in a tree

**Usage**

HasBrlen(x)

**Arguments**

x                      A phylo object

**Value**

A TRUE or FALSE

---

IsGoodChronogram	<i>Check to see that a chronogram is valid</i>
------------------	--

---

**Description**

Check to see that a chronogram is valid

**Usage**

IsGoodChronogram(phy)

**Arguments**

phy                    Input phylo object

**Value**

Boolean: TRUE if good tree

---

**PadMatrix***Function to fill in empty cells in a patristic matrix for missing taxa*

---

**Description**

Function to fill in empty cells in a patristic matrix for missing taxa

**Usage**

```
PadMatrix(patristic.matrix, all.taxa)
```

**Arguments**

`patristic.matrix`

A patristic matrix with row and column names for taxa

`all.taxa`

A vector of the names of all taxa you want, including ones not in the patristic matrix

**Value**

Patristic.matrix for `all.taxa`, with NA for entries between taxa where at least one was not in the original patristic.matrix

---

**PatristicMatrixToNewick***Convert patristic matrix to a newick string*

---

**Description**

Convert patristic matrix to a newick string

**Usage**

```
PatristicMatrixToNewick(patristic.matrix)
```

**Arguments**

`patristic.matrix`

A patristic matrix

**Value**

A newick string

---

PatristicMatrixToTree *Convert patristic matrix to a phylo object*

---

### Description

Convert patristic matrix to a phylo object

### Usage

```
PatristicMatrixToTree(patristic.matrix)
```

### Arguments

patristic.matrix  
A patristic matrix

### Value

A rooted phylo object

---

ProcessInput *Take input string, figure out if it's newick or list of species*

---

### Description

Take input string, figure out if it's newick or list of species

### Usage

```
ProcessInput(input = c("Rhea americana", "Pterocnemia pennata",  
  "Struthio camelus"), usetnrs = FALSE, approximatematch = TRUE)
```

### Arguments

input           A newick string or vector of taxa, or a phylo object  
usetnrs       Whether to use OpenTree's TNRS for the input  
approximatematch  
              If using TNRS, use approximate matching

### Value

A list with the phy (or NA, if no tree) and cleaned vector of taxa

---

ProcessResultsList	<i>Take results.list and process it</i>
--------------------	---

---

### Description

Take results.list and process it

### Usage

```
ProcessResultsList(results.list, taxa = NULL, partial = FALSE)
```

### Arguments

results.list	A list returned from using GetSubsetArrayDispatch on opentree_chronograms\$trees
taxa	A vector of taxa to match
partial	If TRUE, return matrices that have only partial matches

### Value

A list with the patristic.matrices that are not NA

---

ReorderMatrix	<i>Function to reorder a matrix so that row and column labels are in alphabetical order</i>
---------------	---

---

### Description

Function to reorder a matrix so that row and column labels are in alphabetical order

### Usage

```
ReorderMatrix(patristic.matrix)
```

### Arguments

patristic.matrix	A patristic matrix with row and column names for taxa
------------------	---

### Value

patristic.matrix A patristic matrix with row and column names for taxa in alphabetical order

---

run	<i>Core function to generate results</i>
-----	--

---

**Description**

Core function to generate results

**Usage**

```
run(input = c("Rhea americana", "Pterocnemia pennata", "Struthio camelus"),
    format = "citations", partial = "yes", plot.width = 600,
    plot.height = 600, usetnrs = "no", approximatematch = "yes",
    opentree_chronograms = NULL)
```

**Arguments**

input	A newick string or vector of taxa
format	The output format
partial	How to deal with trees that have a subset of taxa in the query
plot.width	Width in pixels for output plot
plot.height	Height in pixels for output plot
usetnrs	Whether to use OpenTree's TNRS for the input
approximatematch	If using TNRS, use approximate matching
opentree_chronograms	The list of lists containing the input trees and other info

**Value**

results in the desired format

---

RunSDM	<i>Function to compute the SDM supertree Criscuolo et al. 2006</i>
--------	--

---

**Description**

Function to compute the SDM supertree Criscuolo et al. 2006

**Usage**

```
RunSDM(filtered.results, weighting = "flat")
```

**Arguments**

filtered.results	List of patristic matrices
weighting	flat, taxa, inverse

Details

Weighting is how much weight to give each input tree. flat = all trees have equal weighting taxa = weight is proportional to number of taxa inverse = weight is proportional to 1 / number of taxa Criscuolo A, Berry V, Douzery EJ, Gascuel O. SDM: a fast distance-based approach for (super) tree building in phylogenomics. Syst Biol. 2006;55(5):740–55. doi: 10.1080/10635150600969872.

Value

A list containing phy (a chronogram), and filtered.results that were actually used

---

SaveOTtoLChronograms	<i>Save all chronograms from Open Tree of Life</i>
----------------------	--

---

Description

Save all chronograms from Open Tree of Life

Usage

```
SaveOTtoLChronograms(file = "opentree_chronograms.rda", verbose = FALSE)
```

Arguments

file	Path including file name
verbose	If TRUE, give status updates to the user

Value

None

---

SummarizeResults	<i>Summarize a filtered results list in various ways</i>
------------------	--

---

Description

Summarize a filtered results list in various ways

Usage

```
SummarizeResults(filtered.results, output.format, partial = TRUE,
  cache = get("opentree_chronograms"), suppress.citations = FALSE)
```

Arguments

filtered.results	A list of patristic matrices; labels correspond to citations
output.format	The desired output format
partial	If TRUE, use source trees even if they only match some of the desired taxa
cache	The cached trees and other information
suppress.citations	If using a format that would normally print() citations, turn this off

**Value**

Depends on output format

---

SummaryPatristicMatrixArray

*Summarize patristic matrix array (by default, median)*

---

**Description**

Summarize patristic matrix array (by default, median)

**Usage**

```
SummaryPatristicMatrixArray(patristic.matrix.array, fn = stats::median)
```

**Arguments**

patristic.matrix.array	3D array of patristic matrices
fn	The function to use ot summarize

**Value**

A 2d array with the median (or max, or mean, etc) of the input array

---

TabulateRelevantAuthors

*Return the relevant authors for a set of studies*

---

**Description**

Return the relevant authors for a set of studies

**Usage**

```
TabulateRelevantAuthors(results.index, cache = get("opentree_chronograms"))
```

**Arguments**

results.index	A vector from FindMatchingStudyIndex() with the indices of the relevant studies
cache	The cache

**Value**

A vector with counts of each author, with names equal to author names

---

**TabulateRelevantCurators**

*Return the relevant curators for a set of studies*

---

**Description**

Return the relevant curators for a set of studies

**Usage**

```
TabulateRelevantCurators(results.index, cache = get("opentree_chronograms"))
```

**Arguments**

<code>results.index</code>	A vector from <code>FindMatchingStudyIndex()</code> with the indices of the relevant studies
<code>cache</code>	The cache

**Value**

A vector with counts of each curator, with names equal to curator names

---

**UnpadMatrix**

*Function to remove missing taxa*

---

**Description**

Function to remove missing taxa

**Usage**

```
UnpadMatrix(patristic.matrix)
```

**Arguments**

<code>patristic.matrix</code>	A patristic matrix with row and column names for taxa
-------------------------------	---

**Value**

Patristic.matrix for all.taxa

---

UseAllCalibrations	<i>Use all calibrations given trees in database to date a tree</i>
--------------------	--

---

**Description**

Use all calibrations given trees in database to date a tree

**Usage**

```
UseAllCalibrations(phy = GetBold0ToLTree(c("Rhea americana",  
      "Struthio camelus", "Gallus gallus")), partial = TRUE, usetnrs = FALSE,  
      approximatematch = TRUE, cache = get("opentree_chronograms"),  
      expand = 0.1, giveup = 100)
```

**Arguments**

phy	A phylo object
partial	If TRUE, use source trees even if they only match some of the desired taxa
usetnrs	If TRUE, use OpenTree's services to resolve names. This can dramatically improve the chance of matches, but also take much longer
approximatematch	If TRUE, use a slower TNRS to correct misspellings, increasing the chance of matches (including false matches)
cache	The cached set of chronograms and other info from data(opentree_chronograms)
expand	How much to expand by each step to get consistent calibrations
giveup	How many expansion to try before giving up

**Details**

This will try to use the calibrations as fixed ages. If that fails (often due to conflict between calibrations), it will expand the range of the minage and maxage and try again. And repeat. expand sets the expansion value: should be between 0 and 1

**Value**

list with chronogram, original calibrations, and expanded calibrations
